

# USER NAVIGATION FLOW

## Screen 1: Welcome & Authentication

- The user can choose to sign up or Log In.
- Enter email/username and password.
- Tap Create Account or Sign In.
- App Response: Check inputs, if the username does not match any accounts in it's database, it will redirect to sign up, if user chooses to sign up it will redirect the user to sign up.

## Screen 2: Baseline & Health Profile Set Up

- Fill in basic demographics: Age, Gender, and Race.
- Complete health history checkboxes: Select family occurrences of Diabetes, Cardiovascular Disease, or Cancer.
- Tap Generate My Profile.
- App Response: Saves profile data, calculates personalised intake baselines using logic/algorithms, and navigates to Screen 3.

## Screen 3: Personalised Health Dashboard

- The user can view customised daily targets such as recommended calorie intake, targets for food categories (vegetables, proteins, grains, healthy fats) and specific dietary watch-outs based on health history (e.g. sodium/sugar caps).
- The user can see daily progress towards targets.
- Tap Log a Meal button to open the camera.

## Screen 4: AI Food Camera

- The user can tap the "Snap Photo" button or upload a meal image from their gallery.
- View a brief processing indicator while the image is analysed.
- The app displays identified food items, estimated calorie count, and macronutrients. The user can tap confirm and save to the daily log. Automatically updates total daily progress on Screen 3.
